# Juniper Router

# Juniper J-Series Router

- Juniper J-series Routers, consisting of the J2300, J4350, and J6350
- Offer predictable high performance and a variety of flexible interfaces that deliver secure reliable network connectivity to remote, branch, and regional offices
- The J4350 and J6350 are Avaya voice-ready, and all models run modular JUNOS software which offers many advanced services (MPLS, IPv6, QoS, multicast, etc) and security (stateful firewall and IPSec VPN), delivering high levels of security, uptime and performance at reduced operations costs
- The J-series offers the performance headroom and extensible memory to meet future demands, providing unmatched reliability, investment protection, and value for the enterprise

# Juniper E-Series Broadband Service Router

- Carrier-class routing with wire-speed performance
- Comprehensive Subscriber Management and IP Service Support
- Low operational costs and consistent services, with a single JUNOSe image across all platforms and policy-based control via SDX-300
- Sophisticated, dynamic QoS implementation optimized for multiplay service delivery to business and residential customers

# Juniper M-Series Router

- M7i, M10i, M20, M40e, M120, M320 Multiservice Edge Routers
- Multiservice edge router delivering any Layer 2 or Layer 3 service to any customer
- Low operational costs and consistent services, with a single JUNOS image across all platforms and policy-based control via SDX-300
- IP/MPLS services that scale with proven stability in the world's largest networks

# Juniper T-Series Router

- Efficient scaling, from 320 Gbps to multiterabit levels
- Matrix technology allows multi-chassis configuration supporting multi-terabits throughput
- Support for all interface types including SONET, Ethernet, ATM, and Channelized
- Architected to support speeds from Channelized up to 40 G
- Full IPv4 and IPv6 unicast and multicast support
- MPLS and GMPLS support
- Advanced security features including industry-leading control-plane protection
- Carrier of carrier VPNs

# Cisco 7600 Series Routers

- Flexibility of 4 different form factors chassis: 7604,7606,7609 and 7613
- Modular and scalable from 32 Gbps to 720 Gbps switch fabric, or 40 Gbps capacity per slot
- One of the widest, most complete ranges of WAN interface in the industry, with DS0 to OC-192 WAN connectivity and 10 Gbps Ethernet
- Supports the new Cisco Shared Port Adapter (SPA)/SPA Interface Processor (SIP) portfolio, offering dramatically increased slot economics
- Support high-performance applications e.g. IP/MPLS PE, Metro Ethernet access, Enterprise WAN aggregation
- Leveraging the FlexWAN module,7x00 port adapters are shared with 7200 and 7500
- Compatible with Cat 6500 LAN interfaces, offering 10 Mbps Ethernet to 10 Gbps
- Business-class security supports service modules including IPSec, firewall, SSL, VPN, IDS and DoS

# Cisco 12000 Series Routers Model (cont.)

The Cisco 12000 Series offers the only portfolio 10-Gbps systems with the capacity, performance, service enablers, and operational efficiencies to build the most competitive IP networks.

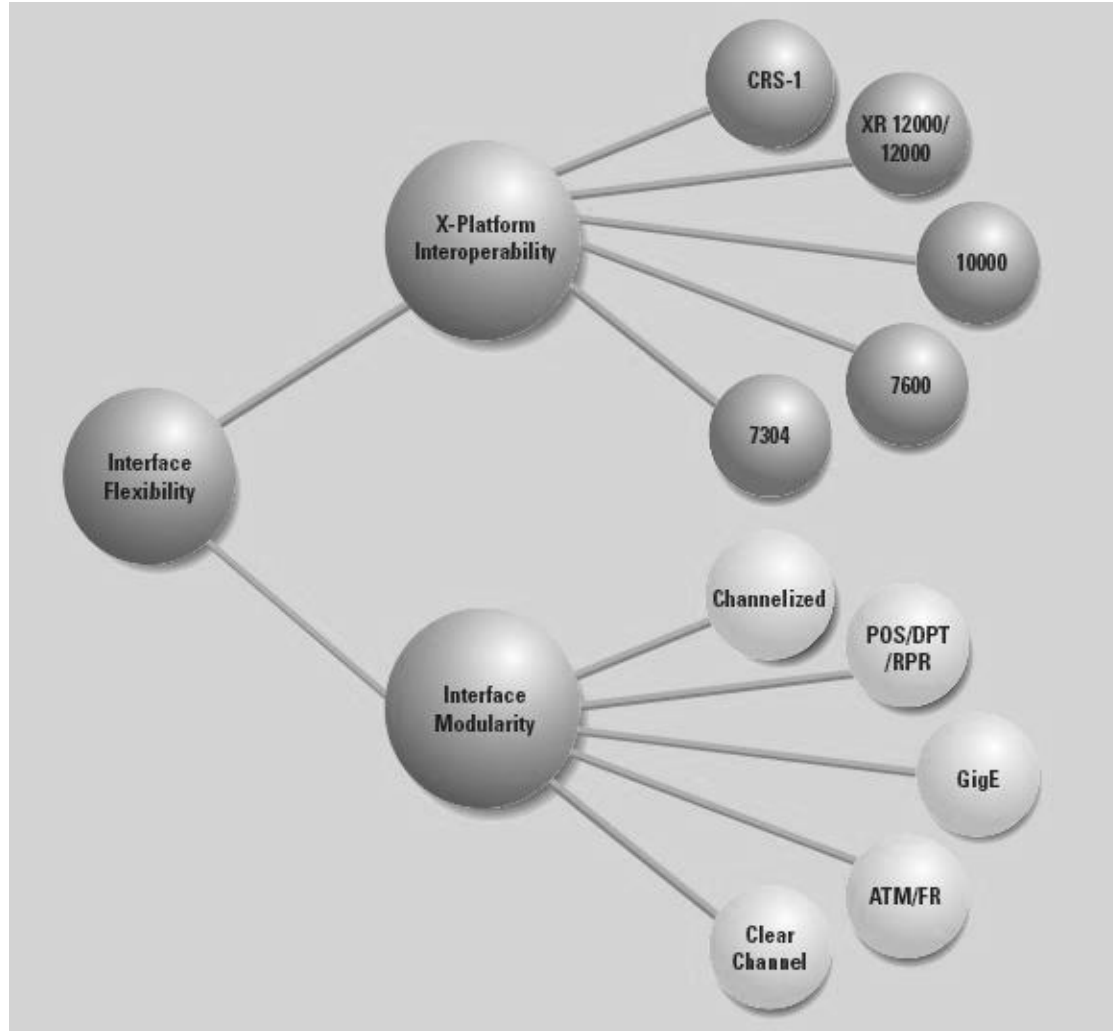

Elements of the Cisco 12000 Series include:

- An array of chassis options that fit your scaling and real-estate requirements
- A superior distributed architecture where important components are distributed across line cards, helping ensure higher performance and system availability
- An extensive portfolio of line cards and options such as redundant gigabit route processors and a 1:N redundant, modular switch fabric that delivers interface diversity, high performance, and high availability
- Industry-leading Cisco IOS Software to help enable the delivery of a comprehensive suite of software features that are needed to support today's networks and tomorrow's value-added services
- Cisco 12000 Router Manager to help customers deploy, configure, and manage Cisco 12000 Series products

# 12000 Important Features:

- Cisco I-Flex design--A portfolio of shared port adapters (SPAs) and SPA interface processors (SIPs) that prioritize voice, video, and data services so you can meet your customers' diverse service needs and stringent service-level agreements
- Advanced software technologies, for high standards of routing performance and QoS
- Comprehensive high-availability support to help avoid planned and unplanned network downtime
- Integrated core and edge feature set, supporting a wide range of business and consumer services
- Fully upgradable modular switch fabric and Cisco IOS XR Software upgrade capability, to protect investments and reduce total cost of ownership.

# Cisco I-Flex Design

# SPA & SIP

# The relationship between Cisco XR 12000 and Cisco 12000

The Cisco XR 12000 Series and Cisco 12000 Series routers are:

- A portfolio of intelligent routing solutions that scale from 2.5- to 10-Gbps capacity per slot,
- Helping enable carrier-class IP/MPLS networks and accelerating your company's evolution to IP NGNs.
- Currently more than 500 customers use an installed base of more than 25,000 Cisco 12000 Series routers with Cisco IOS Software.

To meet the current and future needs of these customers, Cisco Systems® will continue to invest in Cisco IOS and Cisco IOS XR Software and in new hardware. The Cisco XR 12000 Series offers you a smooth upgrade path for your installed base of market-leading Cisco 12000 Series as you transition to a converged IP NGN infrastructure.

# IP NGN

- A sweeping transformation of both a service provider's entire network and its business.
- The IP NGN constantly evolves to adapt to customer demand and new technology opportunities.
- The Cisco IP NGN is about more than voice; it encompasses all of a service provider's current and future services. It is important to recognize that most growth will occur in services such as data and video.

# Cisco XR 12000 Series

## Major Components

- Provides fully upgradable, single-chassis platforms ranging from 2.5- to 10-Gbps capacity per slot.
- Consists of the latest hardware advances of the Cisco 12000 Router, including the ISE line cards, the performance route processor (Cisco XR 12000 and 12000 Series Performance Route Processor-2 [PRP-2]), as well as the industry-proven chassis and multigigabit switch fabric.

# Cisco XR 12000 Multiservice Scale

- Cisco IOS XR Software distributes processing intelligence
- Dedicated queuing application-specific integrated circuits (ASICs) on each ISE line card
- Multicast replication

# Cisco CRS-1 Single Shelf

- Supports standalone configurations of 320-Gbps and 640-Gbps systems enabling 40-Gbps per slot capacity in all form factors.
- Supports both fixed and modular line cards usable across all configurations. The fixed cards feature the world's first 40-Gbps (OC-768/STM-256) tunable WDMPOS and POS interfaces.
- Use Cisco IOS XR software
- The Cisco I-Flex design offers a portfolio of modular interfaces featuring shared port adapters (SPAs) and SPA interface processors (SIPs).

# Cisco CRS-1 Multishelf System

- Consists of 2 to 72, 40-Gbps-slot line-card shelves and 1 to 8 fabric shelves for a total switching capacity of up to 92 Tbps
- Supports in-service upgrade from single-shelf to multishelf configuration with the addition of 1 to 8 fabric shelves
- Protects investments by using modular services cards (MSCs) and physical layer interface modules (PLIMs) that are fully interchangeable across the entire CRS-1 product family
- Supports up to 1152 slots for MSCs, PLIMs, and distributed route processors
- Features line-card shelves connected to the fabric-card shelves supporting true fabric shelf redundancy, service-intelligent fabric queuing, and massive multicast replication scale

# Models Comparison

Model	Slot Capacity	Aggregate Switching Capacity	Dimensions (H x W x D)
<b>Cisco CRS-1 4-Slot Single-Shelf System</b>	4 slots	320 Gbps	30 x 18.55 x 30.28 in. (76.2 x 47.12 x 76.91 cm) with front cover
<b>Cisco CRS-1 8-Slot Single-Shelf System</b>	8 slots	640 Gbps	38.5 x 17.5 x 36.6 in. (99.06 x 44.45 x 93.0 cm)
